

APIs become interfaces.

Raw JSON is hard to read. Paste a GET endpoint or a curl command, and Imago builds the page the data deserves.

```
GET api.open-meteo.com/v1/forecast

{
  "latitude": 13.08,
  "longitude": 80.27,
  "current": {
    "temperature_2m": 28.4,
    "relative_humidity_2m": 74,
    "wind_speed_10m": 12.1,
    "uv_index": 6.2
  },
  "hourly": { ... }
}
```

1 Paste an endpoint →

2 Imago reads its shape →

3 A live page, drawn for it

Reads the shape

Metrics, charts and tables chosen for your data, not a wall of JSON.

Remembers it

A shape it has seen before comes straight back, with no model call.

Watches it change

Keep an endpoint live. Amber marks exactly what moved.

Runs in your browser · Your keys stay on your device · Works without a key · Share any page as a link

Paste your first endpoint.

Free. No account. Nothing to install.
