The logo

The Reveal mark and the Imago wordmark, locked up. This is the master artwork; every version on the pages that follow comes from it.

PRIMARY · INK ON PAPER OR WHITE

REVERSED · WHITE ON INK

imago

(n.) ih-MAH-go

1 · LATIN

Image.

2 · ENTOMOLOGY

**The final, fully formed adult stage
an insect reaches after metamorphosis.**

That is the product. An API response is material still changing form.
Imago reads its shape and gives it the finished form it was always
heading for: an interface a person can read.

1 RESPONSE

raw JSON

```
{
  "city": "Chennai",
  "temperature_2m": 28.4,
  "wind_speed_10m": 12.1
}
```

2 SHAPE

values become types

```
{
  city: string,
  temperature_2m: number,
  wind_speed_10m: number
}
```

3 INTERFACE

the finished form

Chennai

28.4°C

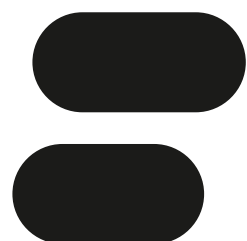

Wind 12.1 km/h

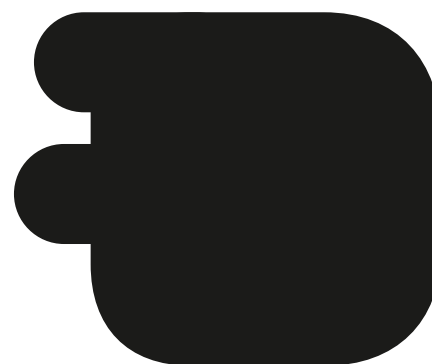

Data in. Interface out.

The mark tells the product's story in one shape, read left to right.

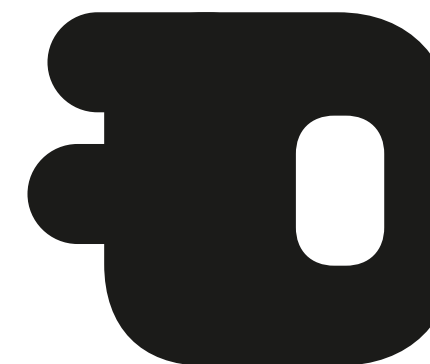

STEP 1

STEP 2

STEP 3

Fields arrive

Two rounded bars enter from the left: the keys and values an API sends back. They are uneven, because responses are.

They become one body

The fields join a single rounded object. The response stops being loose values and is understood as a whole.

A window opens

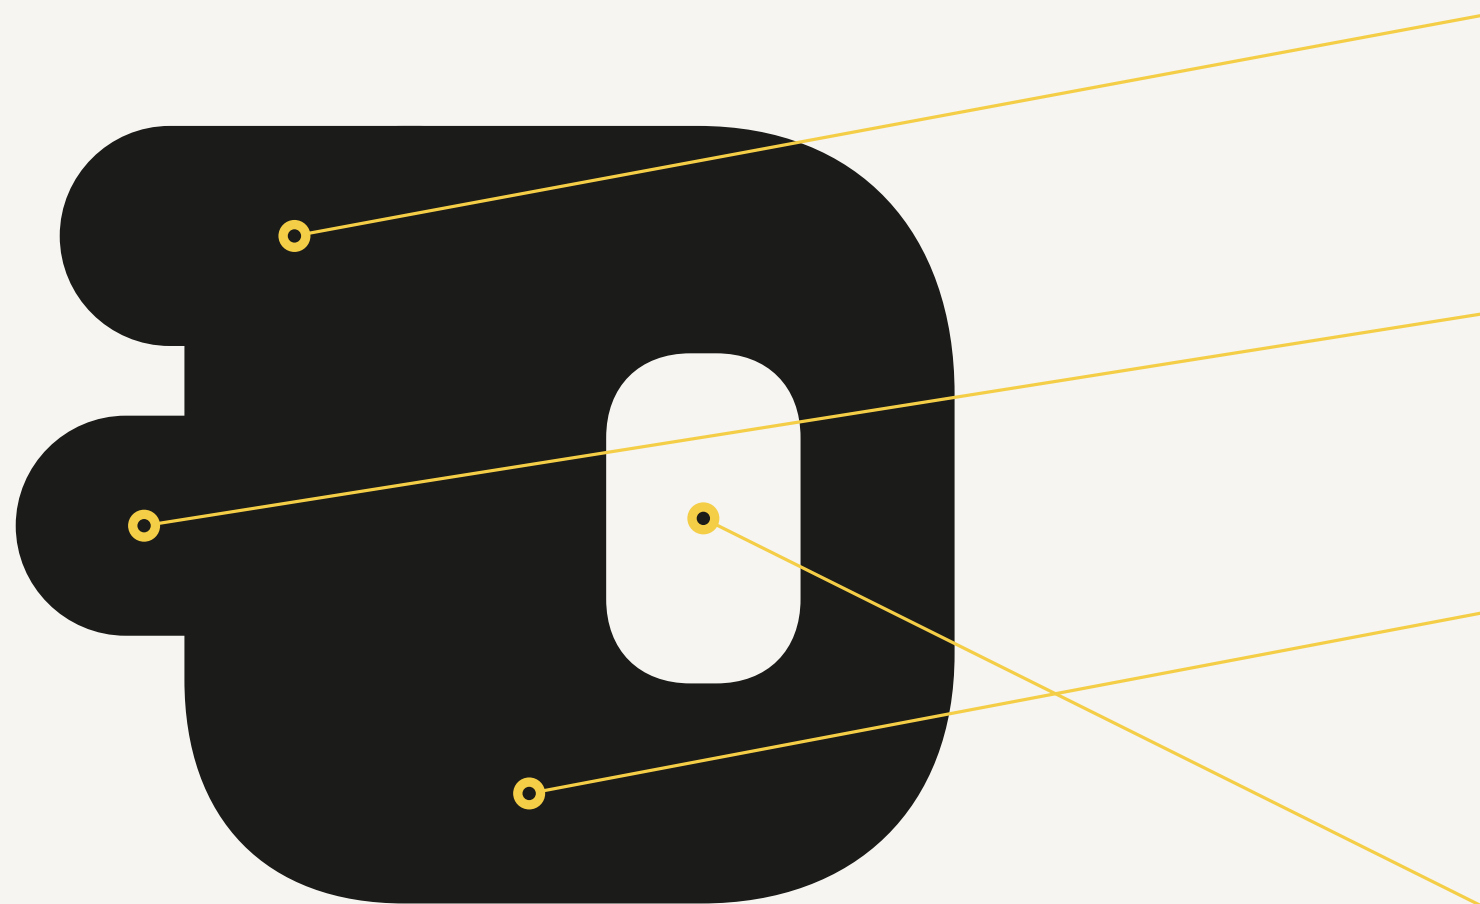

An aperture is cut into the body: the usable interface Imago finds inside the data. That opening is the product.

"Incoming API fields become a proper window."

Anatomy

Four parts, each standing for something the product does.

01 Field

A key and its value, arriving from the API.

02 Second field

Offset and shorter. Responses are uneven, and the mark admits it.

03 Body

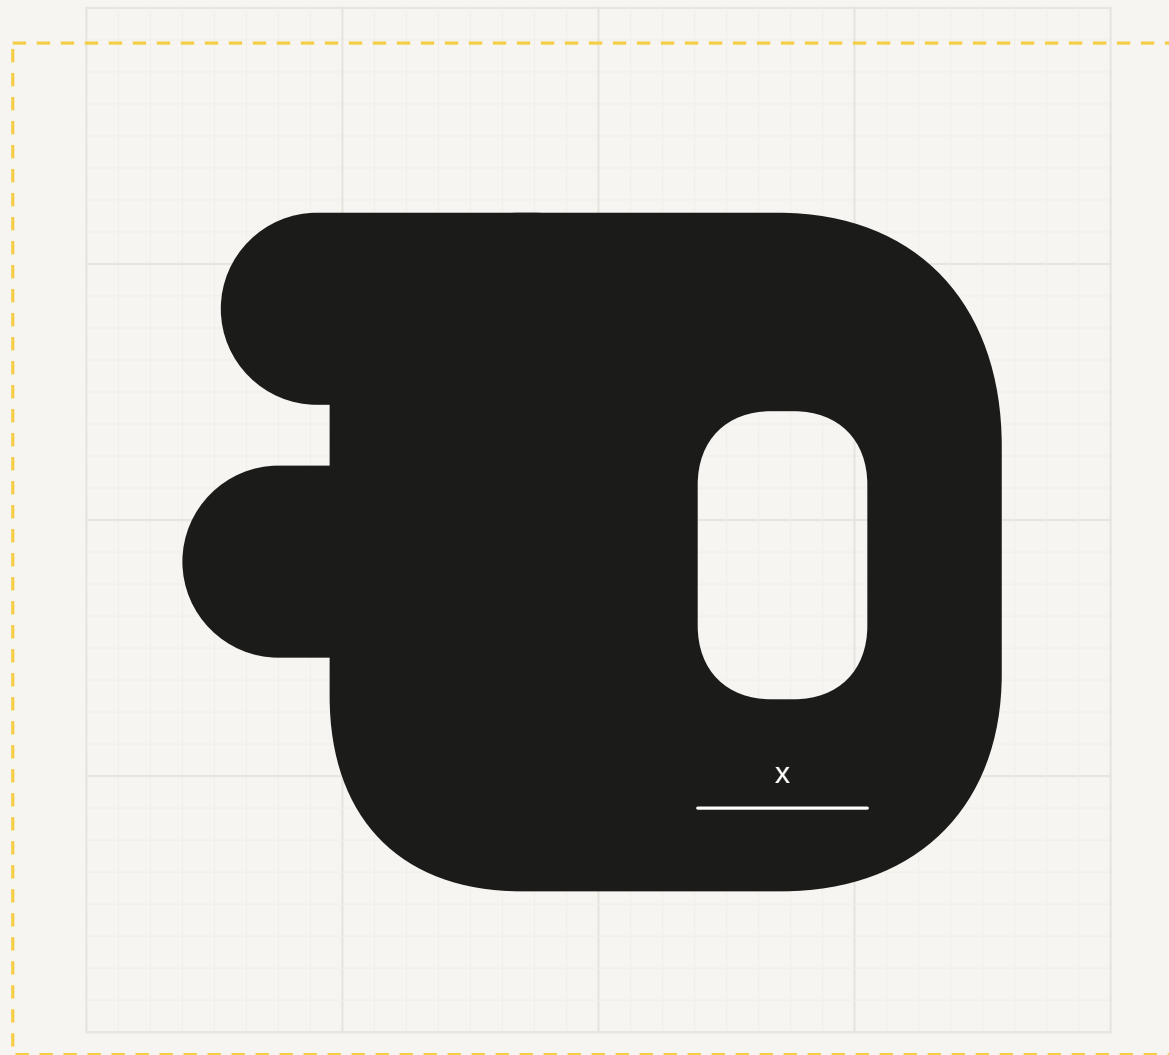

The fields merge into one rounded object: the response, read as a whole.

04 Aperture

The window cut into the body: the interface revealed inside the data.

Construction and clear space

Grid

Drawn on a 32-unit square. Fields are 6 units tall with fully round ends; every corner is a true radius.

Clear space

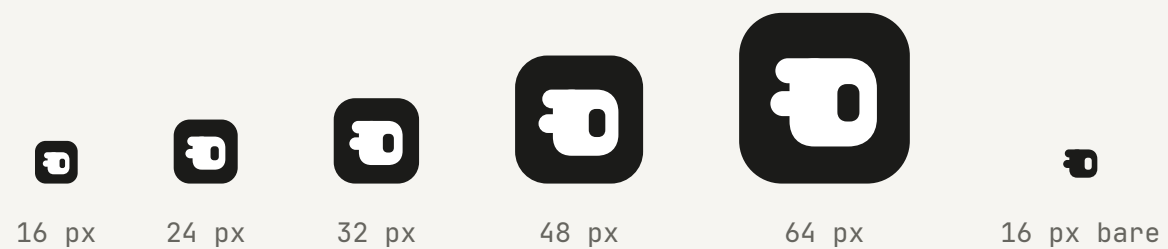

Keep at least one aperture width (x) clear on every side. Nothing enters the dashed frame.

Minimum size

Bare mark: 16 px, only with excellent contrast. Below 24 px, use the app icon: the fields merge into the body.

Colour

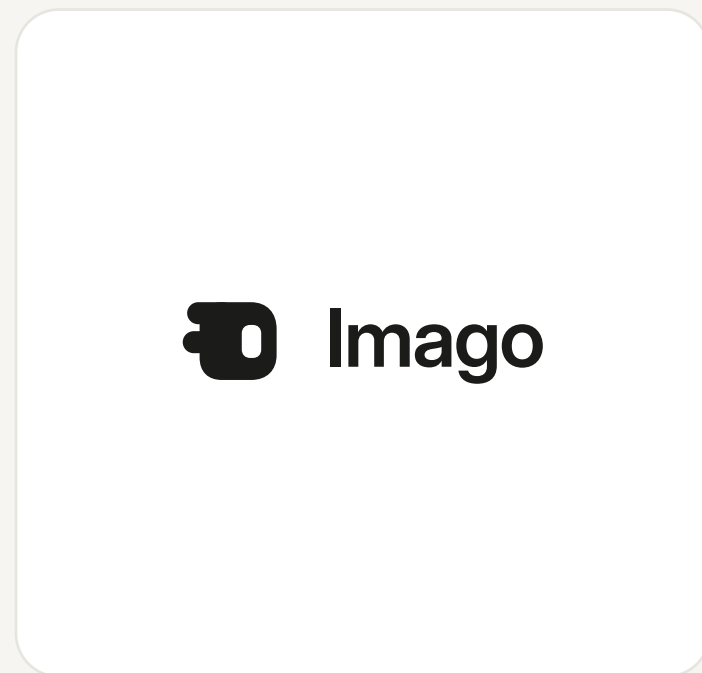

Always one flat colour. Ink on light surfaces, white on ink.

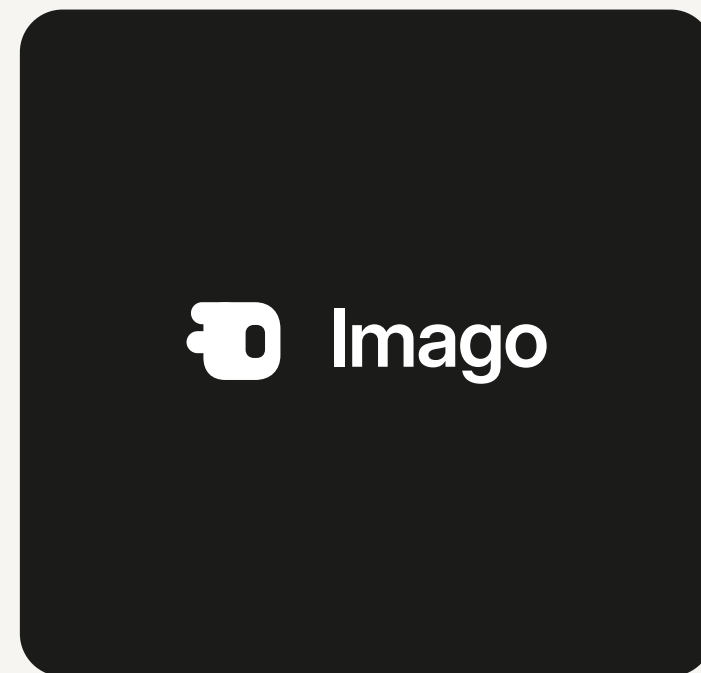

Logo versions

Four versions cover every surface. Pick by background and size, never by taste.

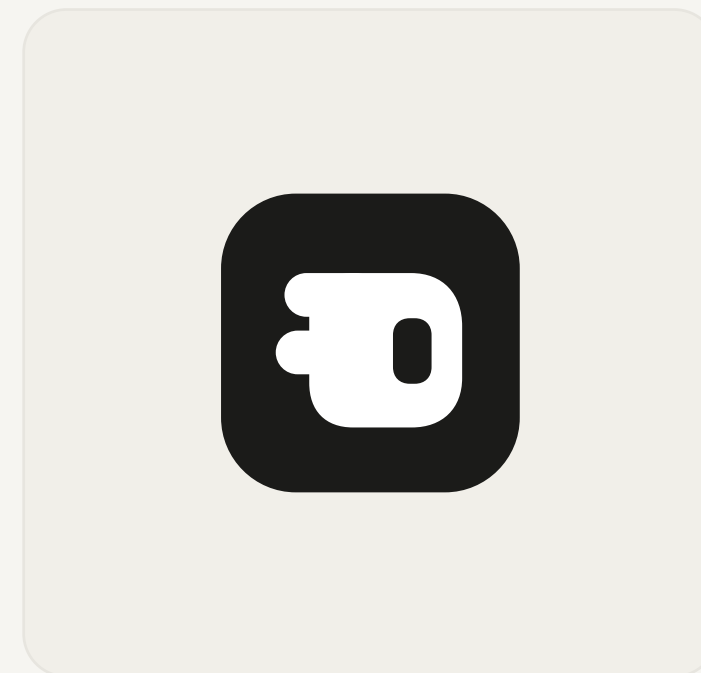

Primary

Mark and wordmark in ink on paper or white. The default everywhere there is room.

Reversed

White on ink. Dark surfaces, the cover of a deck, the footer of a site.

App icon

The mark in white on an ink tile, $rx = \text{size} / 4$. Favicons, docks, anything below 24 px.

Tile lockup

App icon plus wordmark. Small headers and places where the bare mark would thin out.

Misuse

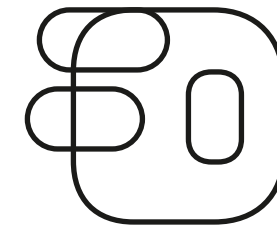

The mark only works as drawn. Each of these breaks what it says.

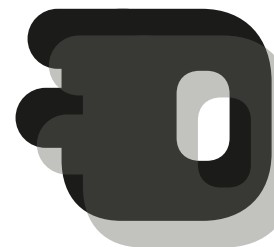

✗ Don't rotate it

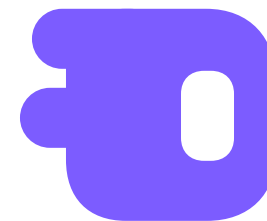

✗ Don't stretch or squash it

✗ Don't outline it

✗ Don't add a shadow or effect

✗ Don't give it a brand colour

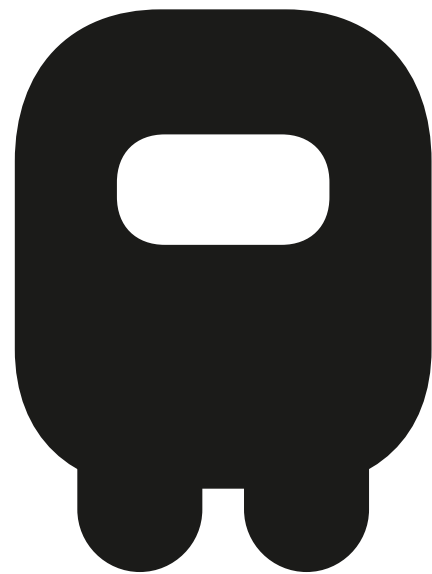

✗ Don't set it on busy imagery

Meet Amigo

Swap two letters and imago becomes amigo, Spanish for friend. Amigo is the mark stood up to help, in two poses.

STANDING · HELPING, ONBOARDING, SUCCESS

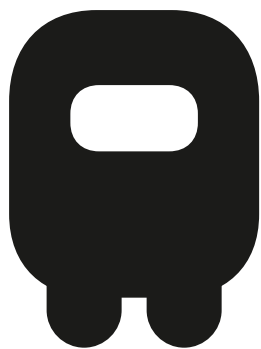

RESTING · EMPTY STATES AND PAUSED WATCHES

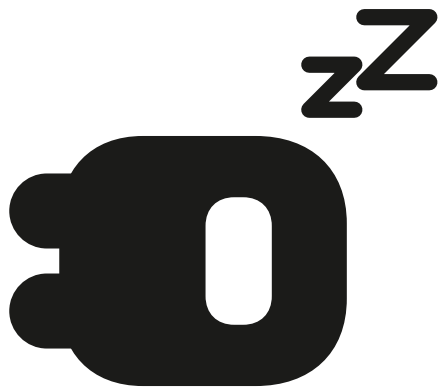

Using Amigo

Amigo is the Imago system standing up to help. It is built from the mark, so it never needs a face.

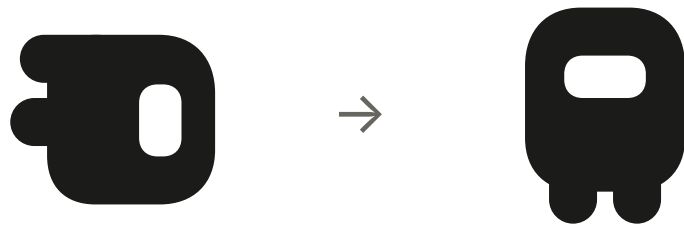

STANDING

RESTING · LYING DOWN

WHERE IT COMES FROM

Same body, same aperture, stood upright. The two incoming fields become two centred legs.

IN USE · EMPTY STATE, RESTING

No endpoints saved yet

Paste a URL above and it will appear here.

Use Amigo in

- Loading and empty states
- Onboarding and setup
- Success confirmations
- Recoverable errors
- Small moments in docs and slides

Never in

- The favicon or the app icon
- The navigation wordmark
- Dense data views
- Anywhere a status icon is more precise

Rules

- One flat colour, like the mark
- Keep the body, aperture and legs
- No eyes, mouth, arms, clothes or expressions
- Never a robot, animal or person
- Personality comes from the copy beside it
- Zs only lying down, never standing

Colour

Ink and paper are the brand. Imago has no brand hue: colour means the user's data moved, never us.

Ink

The mark, primary text, dark surfaces

HEX #1B1B19
RGB 27 27 25
CMYK 0 4 10 92

Paper

The reading surface, warm so JSON never glares

HEX #F6F5F1
RGB 246 245 241
CMYK 2 2 5 0

Amber

A value changed

HEX #F5CE47
RGB 245 206 71
CMYK 2 18 80 0

Green

Live, succeeded

HEX #4FA96A
RGB 79 169 106
CMYK 70 5 75 0

Red

Failed, destructive

HEX #D9534F
RGB 217 83 79
CMYK 8 80 70 0

Blue

Links, and only links

HEX #3F6FB5
RGB 63 111 181
CMYK 78 50 0 0

Accents are signals, not decoration. If a colour doesn't carry a meaning, it doesn't go in.

Typography

One family does the work through weight and size. Mono is kept for what machines produce.

Aa

Inter Display

SemiBold · titles and the wordmark
Tracking -0.035em at display sizes.

Aa

Inter

Regular, Medium, SemiBold · everything people read
Body 14 px, labels 11.5 px SemiBold.

Aa

JetBrains Mono

Regular · URLs, JSON, headers, hashes
If a machine produced it, it can be mono.

APIs become interfaces.

Forecast · Chennai

Schema already known: reused cached interface, no model call.

Voice and use

APIs become interfaces.

The tagline, always in full, always with its full stop. Plain, precise and accountable: say what happened, give the likely cause and the next step, use exact numbers.

SAY

- Schema already known: reused cached interface, no model call.
- The browser could not reach this endpoint. It may not send CORS headers.
- Rate: 1.1 → 1.2

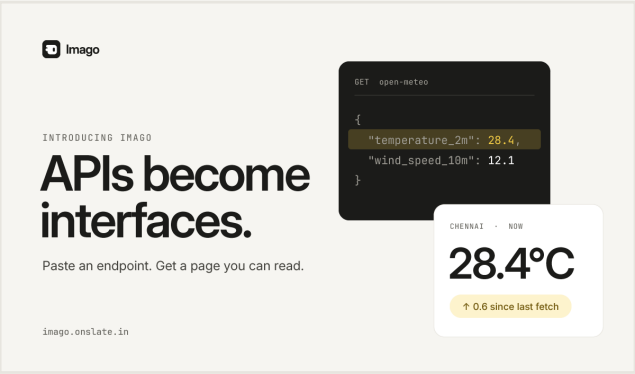

NOT

- Awesome, we magically transformed your API!
- Oops, something went wrong.
- Loading your amazing data ✨

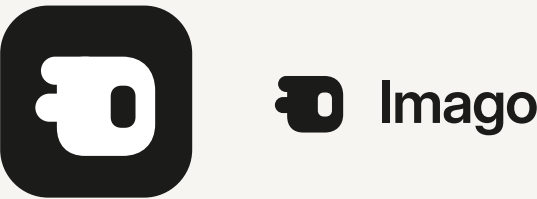

No emoji. No exclamation marks. No hype.
